

Ahmad Munir

Software Engineer · P2P / Node.js

contactahmadmunir@gmail.com • github.com/ddroid • linkedin.com/in/ddroid • ddroid.dev

Remote • Pakistan • Open to worldwide remote

Summary

Node.js / JavaScript & TypeScript engineer building peer-to-peer applications. Focused on concurrent networking, NAT traversal, and zero-infrastructure multiplayer and sync patterns. Daily Keet user in the Holepunch / Pear ecosystem; open-source contributor at Playproject.io. Experienced with 2+ years of development in Node.js and 1.5 years building P2P systems. Ships real-time apps with no central application server: peer discovery, high-frequency state channels, and relay fallbacks when STUN-only paths fail. Collaborates and contributes to open-source and other projects worldwide remotely. Based in Pakistan, a large crypto-active market with strong retail interest in BTC to USDT and peer-to-peer digital finance.

Experience

Playproject.io

Software Engineer

REMOTE

Jan '25 – present

Builds JavaScript tooling for peer-oriented and networked experiments in a P2P-adjacent open-source ecosystem. Designed and merged the `net` module for `datashell`: shared message routing and network configuration for component-to-component and P2P-oriented communication. Maintains performance-minded reusable UI systems (`ui-components`, `graph-explorer`). Collaborates in public: ships contributor-friendly improvements, documents APIs, and reviews design tradeoffs for networked prototypes.

GoWhite (WHITE Fintech)

Software Engineer

REMOTE

Feb '26 – Apr '26

Short-cycle product engineering engagement in a crypto / fintech context aligned with digital assets and payment-oriented surfaces.

SpaceP2P (Nebula Arena)

github.com/ddroid/spacep2p

Creator, TypeScript / Node 22 / WebRTC / Trystero

2026 – present

Real-time multiplayer space combat with *no game server*. Peer discovery and matchmaking over WebRTC and Nostr relays. Concurrent networking: `state` channel at ~20 Hz plus `fire` / `hit` / `kill` action channels; authoritative-per-peer model with remote interpolation. Documented real-world NAT failure modes (STUN-only LAN vs mobile / cross-NAT requiring TURN; Metered / Cloudflare). Playable demo: spacep2p.ddroid.dev.

STXWORX

github.com/ddroid/smartcontracts-stxworx

Lead Developer, TypeScript + Clarity

2025 – present

Decentralized freelance marketplace with multi-token escrow and programmable payment hooks. Presented the protocol at DoraHacks BuidlBattle 2.

Ronin

github.com/roninchat/ronin

Lead Developer, Rust + GPU

2026 – present

Native Linux AI workbench (threaded chat, context tools, local-first storage). 15+ merged PRs as primary contributor spanning persistence, streaming, providers, and tooling.

Open Source & Developer Tooling

ONGOING

Creator / Maintainer

`linkdrop`: Rust CLI and HTTP service for publishing HTML previews. (Implementing P2P stack soon)
`gnome-nord-rice`: beginner-friendly Linux desktop documentation (70+ GitHub stars).

Education

University of Gujrat (UOG)

BSc in Computer Science (Graduating in 2029)

GUJRAT, PAKISTAN

Sep 2025 – Present

Skills

P2P & networking: Peer-to-peer application design; WebRTC; relay-assisted connectivity; NAT traversal (STUN / TURN); peer discovery / matchmaking; authoritative-per-peer sync; multiplexing-style action channels; zero-infrastructure multiplayer. Daily Keet user (20+ communities) in the Holepunch / Pear ecosystem; building toward hyperdht, hyperswarm, hypercore, hyperbee.

Languages & runtime: Node.js, JavaScript, TypeScript; Rust for systems / desktop tooling; Vite / npm. Concurrent peer state channels, connection reliability under hostile NATs, encrypted transport via WebRTC DTLS.

Related: Web3 / decentralized apps (Clarity contracts, multi-token escrow); React-style and vanilla JS UI for P2P apps; Linux-first workflows; public GitHub collaboration. English: full professional proficiency.

Interests

Non-exhaustive: Exploring peer-to-peer systems/protocols like scuttlebutt, gnutella, torrent, Holepunch / Pear / Keet. Looking into Open source, Linux, Networking Protocols, Web3 and digital finance (USDT), remote collaboration, developer tooling, research-minded building.
